

Proposal for Aiden, Stacking Cash

Hassan, CrackClay. Based on our call.

Where you're at

You're building the sales platform for insurance reps. Non-captive is your starting ICP. Meta already works because your audience lives on Instagram and TikTok. Now you want LinkedIn and cold email opened as two new channels. You ran a GTM Engineer ad and are going through interviews. This is one of those conversations.

Why this angle wins

We are not pitching a policy. We position as an insurance shop in the non-captive space. That means we talk customer needs, lay out options, and use no-pressure copy. It creates curiosity and opens the door for a conversation instead of triggering a defensive reply. Most of the response rate comes from that framing alone.

Compliance

Cold email in the US is a gray area, not illegal. CAN-SPAM comes down to sender identity, working unsubscribe, and no misleading subject lines. We follow all three. GDPR does not apply because we do not touch Europe. The FTC angle you raised is worth watching, but nothing on it is landing in the outbound communities I am part of yet. If your internal bar is stricter than the norm, tell me and we will match it.

How I run the engagement

Two-month test phase first. The goal is speed to signal. I do not want to burn your budget warming infrastructure for three weeks only to find out the offer does not resonate. We skip that phase. Campaigns go live in 4 to 5 days instead of 14 to 20.

Inboxes. 250 pre-warmed mailboxes at \$1.50 each. That covers 100k+ sends per month. Sender domains redirect to stacking.cash. When a lead replies, we CC your main mailbox so leads reach your team from day one, not held inside an inbox we control.

Data. Google Maps scraping. My brother's team runs this same play for an insurance client at 3 million sends a month. The data does not sit in Apollo, ZoomInfo, or Cognism, which means you are not competing for the same inboxes every other outbound team is hitting.

Automation. Claude Code plus MCP, not Clay. Clay makes you dependent on one operator and slows you down with manual table work. Claude Code lets us test many angles in parallel. Your team gets a seat and can prompt the system directly to adjust angles or pull reports.

Tech budget, monthly

- 250 pre-warmed mailboxes: about \$405
- Sequencer options: PlusVibe \$97, Instantly \$358, Smartlead \$174 (recommended)
- Claude Code seat: about \$100 (you likely have one already, just add me)
- Google Maps extraction: included
- Total with Smartlead: about \$590 per month

Every account is in your name. If we part ways, everything stays with you.

Service fee

\$1,700 per month for the two-month test. Work starts week one. The picture becomes clear inside the first month once the first sequence completes. If we need to launch additional sequences, we do. The fee covers list building, copy, campaign setup, angle testing, weekly reports, and reply routing.

After two months, if we have a winning angle, we transition to a retainer. Rough range is \$3,000 to \$5,000 per month depending on volume. If we do not find a winner, you still keep the infrastructure, the data, and the system. No lock-in.

Weekly rhythm

3,000 to 5,000 verified contacts added, 20,000 to 30,000 sends, and a Friday report covering what converted and what to test next.

Timeline

- Day 0: scope approved
- Day 1 to 4: mailboxes provisioned, data pulled, copy drafted
- Day 5 to 7: first campaigns live
- Week 2: first angle iteration
- Week 4: second round of tests
- Week 8: winner identified and Phase 2 scoped, or a clean no-go call

Team behind me

I work on a results-based model, not a freelancer hourly bill. We hit deadlines because I have a team on the backend: one campaign manager and two data operators dedicated to your workflow.

Owed to you from the call

- Landing page of the offer: crackclay.co/campaigns
- All successful case studies are on the landing page already
- Access to the cold email mastermind community I mentioned

Next step

Reply yes and I will queue mailbox provisioning this weekend. If something is off, tell me and I will adjust before we start.
