

OUTBOUND INFRASTRUCTURE

Not a proposal deck. *Just what I'd actually do.*

Based on our July 16 call. For Aiden, Stacking Cash (stacking.cash). From Hassan, CrackClay.

100k sends a month ♦ Anti-retainer pricing ♦ 15M+ records delivered ♦ Person-level emails, not info@

01

YOUR SITUATION

You're building the sales platform for insurance reps.

Non-captive life insurance is the starting ICP. Meta already works cause your ICP lives on Instagram and TikTok. You want LinkedIn and cold email as new channels. You ran a GTM Engineer ad, going through interviews, this is one of those conversations.

Our edge is we're in non-captive space, we *are* insurance shop. We talk more on customer needs rather than pitch a single policy. So the response will be massive on no-pressure copy. Just an option-exploring angle peaks curiosity and opens doors for convo.

02

ON COMPLIANCE

Cold email in the US is *gray, not illegal.*

I get it, you sit in SaaS compliance yourself. CAN-SPAM is basically sender identity + unsubscribe + no misleading subject. We follow that. GDPR is not on us cause we don't touch Europe.

The FTC/FBI angle you mentioned is real to watch but nothing on it is landing in the outbound communities I'm in yet. If your internal bar is stricter than the norm, tell me, we'll match it.

03

HOW I ACTUALLY RUN THIS

Two-month test phase first. *Speed to signal.*

I don't want to burn your money on infrastructure warmup for 3 weeks and then discover the offer doesn't resonate. So we skip that. Campaigns go live in 4-5 days instead of 14-20.

01

INBOXES

**Pre-warmed mailboxes,
\$1.50 each**

250 mailboxes for 100k+ sends/mo. Sender domains redirect to stacking.cash. When a lead replies we CC your main mailbox so leads hit your team from day one, not sitting in some pre-warmed inbox we control.

02

DATA (MY MOAT)

**Google Maps scraping,
owner inboxes**

My brother runs this exact play for an insurance client at 3M sends/mo. The data does not sit in Apollo, ZoomInfo, or Cognism. This is my secret sauce to hit owners direct. Outbound teams rely on traditional databases and get hit by 10 other competitors on the same list.

03

AUTOMATION

**Claude Code + MCP, not
Clay**

Clay makes you dependent on one operator and slows you down manually clicking tables. Claude Code lets us test tens of angles in parallel. Your team gets a seat and can chat with the system directly to tweak angles, pull reports, whatever.

04

TECH BUDGET ·
MONTHLY

250 pre-warmed mailboxes	~\$405
PlusVibe · cheapest sequencer	\$97
Instantly · widely used	\$358
Smartlead · highly recommended	\$174
Claude Code seat · you likely already have one	~\$100
Google Maps extraction · on me	included
Total (with Smartlead)	~\$680/mo

All accounts in your name. If we part ways, everything stays with you.

05

MY FEE

\$1,700/mo for the 2-month test.

We start action from week one. The picture gets cleared in a month when the first sequence completes. If we need more sequences we launch them. Covers list building (our special moat, nobody does this due to complex operations), copy, campaign setup, running the angle tests, weekly reports, reply routing, all of it.

After 2 months, if we found a winner, we move to retainer. Rough range **\$3,000-5,000/mo** depending on volume. If we didn't find a winner, you still keep everything. No lock-in.

06

WEEKLY RHYTHM

3-5k contacts added. 20-30k sends. Friday report on what converted and what to test next.

07

REALISTIC TIMELINE

Day 0	You say yes
Day 1-4	Mailboxes provisioned, data pulled, copy drafted
Day 5-7	First campaigns live
Week 2	First angle iteration
Week 4	Second round of tests
Week 8	Winner identified → Phase 2 scope, or clean no-go call

08

TEAM BACKING YOU

I work on a **results approach**, not a freelancer hourly bill. We meet deadlines when we have a team on backend. So I have **one campaign guy + two data guys** who will extract for you.

Also owing you from the call: landing page of the offer (crackclay.co/campaigns), a couple client results, and I'll add you to the cold email mastermind community I mentioned.

"The harder the contact is to reach, the better the outreach performs."

— Alex Hormozi · the principle we're built on

09

NEXT STEP

Say yes. I queue mailbox provisioning *this weekend*.

If there's something off tell me and I'll adjust before we start.

Say Yes
