

Proposal for Aiden, Stacking Cash

Hassan, CrackClay. Based on our call.

Where you're at

You're building the sales platform for insurance reps. Non-captive is the starting ICP. Meta already works cause your people live on IG and TikTok. Now you want LinkedIn and cold email opened as new channels. You ran a GTM Engineer ad, going through interviews, this is one of those calls.

Why this angle wins

We're not pitching a policy. We're an insurance shop, non-captive space. That means we talk customer needs, lay out options, no pressure copy. Peaks curiosity, opens the door for convo. Big reply spike comes from that.

Compliance

Cold email in the US is gray, not illegal. CAN-SPAM is basically sender identity plus unsubscribe plus no misleading subject. We do all that. GDPR isn't on us cause we don't touch Europe. The FTC angle you mentioned is worth watching but nothing on it is landing in the outbound communities I'm in yet. If your bar is stricter tell me, we'll match it.

How I actually run this

Two month test first. Speed to signal. I don't want to burn your money warming infra for 3 weeks and then find the offer doesn't hit. Skip that. Campaigns go live in 4-5 days instead of 14-20.

Inboxes: 250 pre-warmed mailboxes at \$1.50 each, that's 100k+ sends a month. Sender domains redirect to stacking.cash. When a lead replies we CC your main mailbox so leads hit your team day 1, not stuck in some inbox we control.

Data: Google Maps scraping. My brother runs this exact play for an insurance client at 3M sends a month. Data doesn't sit in Apollo, ZoomInfo, Cognism. That's how we hit owner inboxes direct. Outbound teams stuck on those databases are getting hit by 10 competitors on the same list.

Automation: Claude Code plus MCP, not Clay. Clay makes you dependent on one operator and it's slow, manual click through tables. Claude Code lets us test tens of angles in parallel. Your team gets a seat, can chat with the system, tweak angles, pull reports.

Tech budget, monthly

- 250 pre-warmed mailboxes: ~\$405
- Sequencer options: PlusVibe \$97, Instantly \$358, Smartlead \$174 (recommended)
- Claude Code seat: ~\$100 (you likely have one, just add me)
- Google Maps extraction: on me
- Total with Smartlead: ~\$680/mo

All accounts in your name. If we part ways nothing walks with me.

My fee

\$1,700/mo for the 2 month test. We start action from week 1. Picture gets clear in a month once the first sequence completes. If we need more sequences we launch them. Covers list building (my moat, hard to do at scale), copy, campaign setup, angle tests, weekly reports, reply routing, all of it.

After 2 months if we found a winner we move to retainer, rough \$3,000-5,000/mo depending on volume. If we didnt find a winner you still keep everything. No lock in.

Weekly rhythm

3-5k contacts added, 20-30k sends, Friday report on what converted and what to test next.

Timeline

- Day 0: you say yes
- Day 1-4: mailboxes provisioned, data pulled, copy drafted
- Day 5-7: first campaigns live
- Week 2: first angle iteration
- Week 4: second round of tests
- Week 8: winner found and Phase 2 scoped, or clean no-go call

Team behind me

I work results approach, not freelancer hourly bill. We hit deadlines cause I have a team on backend. One campaign guy, two data guys extracting for you.

Owing you from the call

- Landing page: crackclay.co/campaigns
- Couple client results (coming)
- Add you to the cold email mastermind community

Next step

Say yes and Ill queue mailbox provisioning this weekend. If somethings off tell me and Ill adjust before we start.

Hassan
