

LinkedIn + Cold Email as a New GTM Channel

For Non-Captive Life Insurance Agents — 2-Month Test to Retainer

Prepared for: Aiden, Stacking Cash (stacking.cash) Prepared by: Hassan, CrackClay Date: July 17, 2026

What I Heard on the Call

You're building the sales platform for insurance reps. Product side is solid: dialer, CRM, tools, everything on top of the rep's operation. Mission is to create more entrepreneurs and help them succeed as the tech landscape shifts.

Right now the ICP is non-captive life insurance agents in the US. 1099 contractors running their own brokerages, MLM structure. They earn commission on their own policy sales, on downline recruit sales, and on recruiting bonuses. Two-sided customer base: consumers they sell to, and reps they recruit. Product mix is whole life (final expense, ~\$1k/mo, savings-account style) and term life (~\$100/mo pure protection). Distinguishing them from captive agents (Global Life, Primerica, etc.) is the hard filter, and LinkedIn Sales Nav alone doesn't do it.

The channel picture: Meta is already working since your ICP lives on Instagram and TikTok. You want LinkedIn and cold email opened as new sources of pipeline and downline recruits. You ran a GTM Engineer ad and are running interviews to lead this.

Your explicit concerns:

1. **Compliance.** You operate in SaaS compliance yourself. US is quietly pushing enforcement (FTC/FBI fingerprinting, evidence build, 2026-2027 fines). Outbound needs to stay inside common US practice.
2. **Speed and burn.** If a channel doesn't work, no crisis. But you don't want to waste months in warmup and setup.
3. **Ownership.** Anything we build should be yours. If we part ways, nothing walks with me.

Roadmap-wise, non-captive insurance is the deep-first niche. You'll broaden later to high-ticket sales, info agencies, AI agencies, recruitment agencies. Whatever we build for insurance should be portable to the next niche.

What I'm Proposing

A 2-month test phase with rigorous angle testing, followed by a retainer once we find message-market fit. Focus is speed to signal, not perfection of setup.

PHASE 1 — TEST (MONTHS 1-2)

Data

- Google Maps extraction for non-captive agent contacts. My brother's team runs the same play for a similar client at 3M sends/mo. The data does not sit in Apollo, ZoomInfo, or Cognism, so you are not fighting for the same inboxes as every other outbound team.
- Enrichment logic to filter captive vs non-captive. Captive companies get excluded upfront.

Infrastructure

- 270 pre-warmed mailboxes at \$1.50/inbox/mo
- Live campaigns in 4-5 days instead of 14-20 days manual warmup
- Sender domains redirect to stacking.cash
- BCC your main mailbox on replies. Leads land in your team's inbox from Day 1.

Automation

- Claude Code + MCP driving the sequencer
- Angle testing runs in parallel: audience slices, copy versions, offers. Tens of variations without the manual click-through Clay operators charge for.
- You get a Claude Code seat. Your team can chat with the system directly, generate reports, tweak angles.

Weekly output: 3-5k verified non-captive agent contacts, 20-30k sends, replies routed via BCC, Friday report on what's converting and next test to run.

PHASE 2 — SCALE (MONTH 3+)

Once we find a winning angle, transition to retainer. Move to owned domains and inboxes if you want, or keep pre-warmed for pace. You own the infrastructure either way.

Tech Stack + Budget (Phase 1)

Item	Provider	Monthly cost
Pre-warmed mailboxes (270)	Vendor	~\$405
Sequencer (Instantly, Smartlead, or PlusVibe)	Your account	\$97-197
Google Maps data extraction	CrackClay-run	included
Email verification	Your account	~\$50
Claude Code seat	Your account	~\$100
Total tech budget		~\$650-750/mo

Every account is in your name. If we part ways, everything stays with you.

Service Fee

Phase 1: \$1,700/mo × 2 months. Covers list building, copy, campaign setup, angle testing, reporting, reply routing.

Phase 2 retainer: scoped after Phase 1. Rough range \$2,500-4,000/mo depending on send volume and inbox count.

Compliance Stance

US cold email is a gray area, not a black one. What we practice: sender identity present, one-click unsubscribe honored, no misleading subjects or from-fields, no address harvesting, no GDPR geographies. That covers CAN-SPAM.

On the enforcement pattern you raised: worth watching. I am active in the cold email mastermind community and none of it is landing there yet. We stay inside the practices that community treats as safe. If your internal bar is stricter, we adjust.

What Happens If Phase 1 Doesn't Hit

You keep the mailboxes, the data, the winning angles we did find, and the Claude Code system. No lock-in beyond the 2-month test window.

Timeline

Day	Milestone
Day 0	Scope approved
Day 1-4	Mailbox provisioning, sequencer setup, ICP data pull, copy drafting
Day 5-7	First campaigns live
Week 2	First reports, first angle iteration
Week 4	Second round of angle tests
Week 8	Winner identified or clear no-go call. Retainer scoped or wind-down.

Deliverables I Owe You (from the call)

- 1. This proposal ✓
- 2. Landing page of the offer (sending via LinkedIn)
- 3. Client results / case study
- 4. Add you to the cold email mastermind community

Next Step

Reply yes or send a redline. On approval, I queue up mailbox provisioning this weekend and we go live Day 5-7.
