Notes & Legend

Unique key	The LinkedIn Profile URL is the unique identifier for each row. Slug is the human-readable form of the same identifier.
Fill rates	Typical fill rates are indicative and based on prior UK pulls. Actual fill on any given delivery may vary by +/- 5 percentage points depending on sector mix and LinkedIn availability at the time of pull.
Delivery formats	CSV (UTF-8), JSON (line-delimited), SFTP drop, or direct API endpoint.
Refresh model	Baseline: full UK dataset delivered once at project start. Refresh cycles thereafter contain only records that are new, updated, or removed since the previous delivery. Each row on refresh carries a change flag: NEW / UPDATED / REMOVED / ENRICHMENT_ONLY.
Change flag column	On refresh deliveries only, an additional column 'change_flag' is included. On the baseline delivery this column is omitted.
Empty fields	An empty cell indicates the value is not available for that profile at the time of pull, not that it is invalid. No placeholder text is used.
Encoding	All text fields are UTF-8. Names, headlines and summaries may contain non-ASCII characters.
Category colours	Blue = person-level fields. Amber = company-level fields (current employer). Green = experience-level fields (current role).
Compliance	All data is sourced under LinkedIn public-profile terms. GDPR / UK DPA 2018 compliant. Opt-outs and removals are honoured on every refresh.
